alink & vlink : These are used to set colors for links in page.

Visited Link color : vlink

Active Link color : alink

Syntax:

```
<body alink="red" vlink="gray"> </body>
```

FAQ: Can we change color for normal link?

Ans : Not possible with HTML.

You can change with CSS.

Ex:

```
<!DOCTYPE html>
```

```
<html>
```

```
  <head>
```

```
    <title>Home</title>
```

```
  </head>
```

```
  <body vlink="gray" alink="red">
```

```
    <a href="http://www.amazon.in">Amazon</a> |
```

```
    <a href="http://www.ebay.com">Ebay Shopping</a> |
```

```
    <a href="http://www.microsoft.com">Microsoft</a>
```

```
  </body>
```

```
</html>
```

Summary:

1. Head

- title, link, meta, style, script

2. Body

## Body Semantic Elements

=====

- Upto HTML 4 body section is designed by using Tables.
- Tables lead to a situation called "Kiss-of-Death".
- Tables are not SEO friendly.
- HTML 5 Introduced new elements into Body section to design a layout that can be SEO friendly.
- The new elements of HTML 5 Body section are:

1. aside
2. article
3. dialog
4. figure
5. figcaption
6. header
7. footer
8. section
9. main
10. nav
11. menu
12. div
13. span

- All are containers

```
<aside>
```

```
...your content
```

```
</aside>
```

- Div defines blocked content.

- Span defines inline content.

Ex:

```
<!DOCTYPE html>
```

```
<html>
```

```
  <head>
```

```
    <title>Home</title>
```

```
  </head>
```

```
  <body>
```

```
    <header>
```

```
      Amazon Shopping
```

```
    </header>
```

```
    <section>
```

```
      <nav>
```

```
        <menu>
```

```
          <div>Home</div>
```

```
          <div>Electronics</div>
```

```
          <div>Footwear</div>
```

```
        </menu>
```

```
      </nav>
```

```
      <main>
```

```
        Shopping Main Content
```

```
      <article>
```

```
    50% OFF on Electronics
</article>
<figure>
